BookRAG — Multimodal RAG over books & PDFs

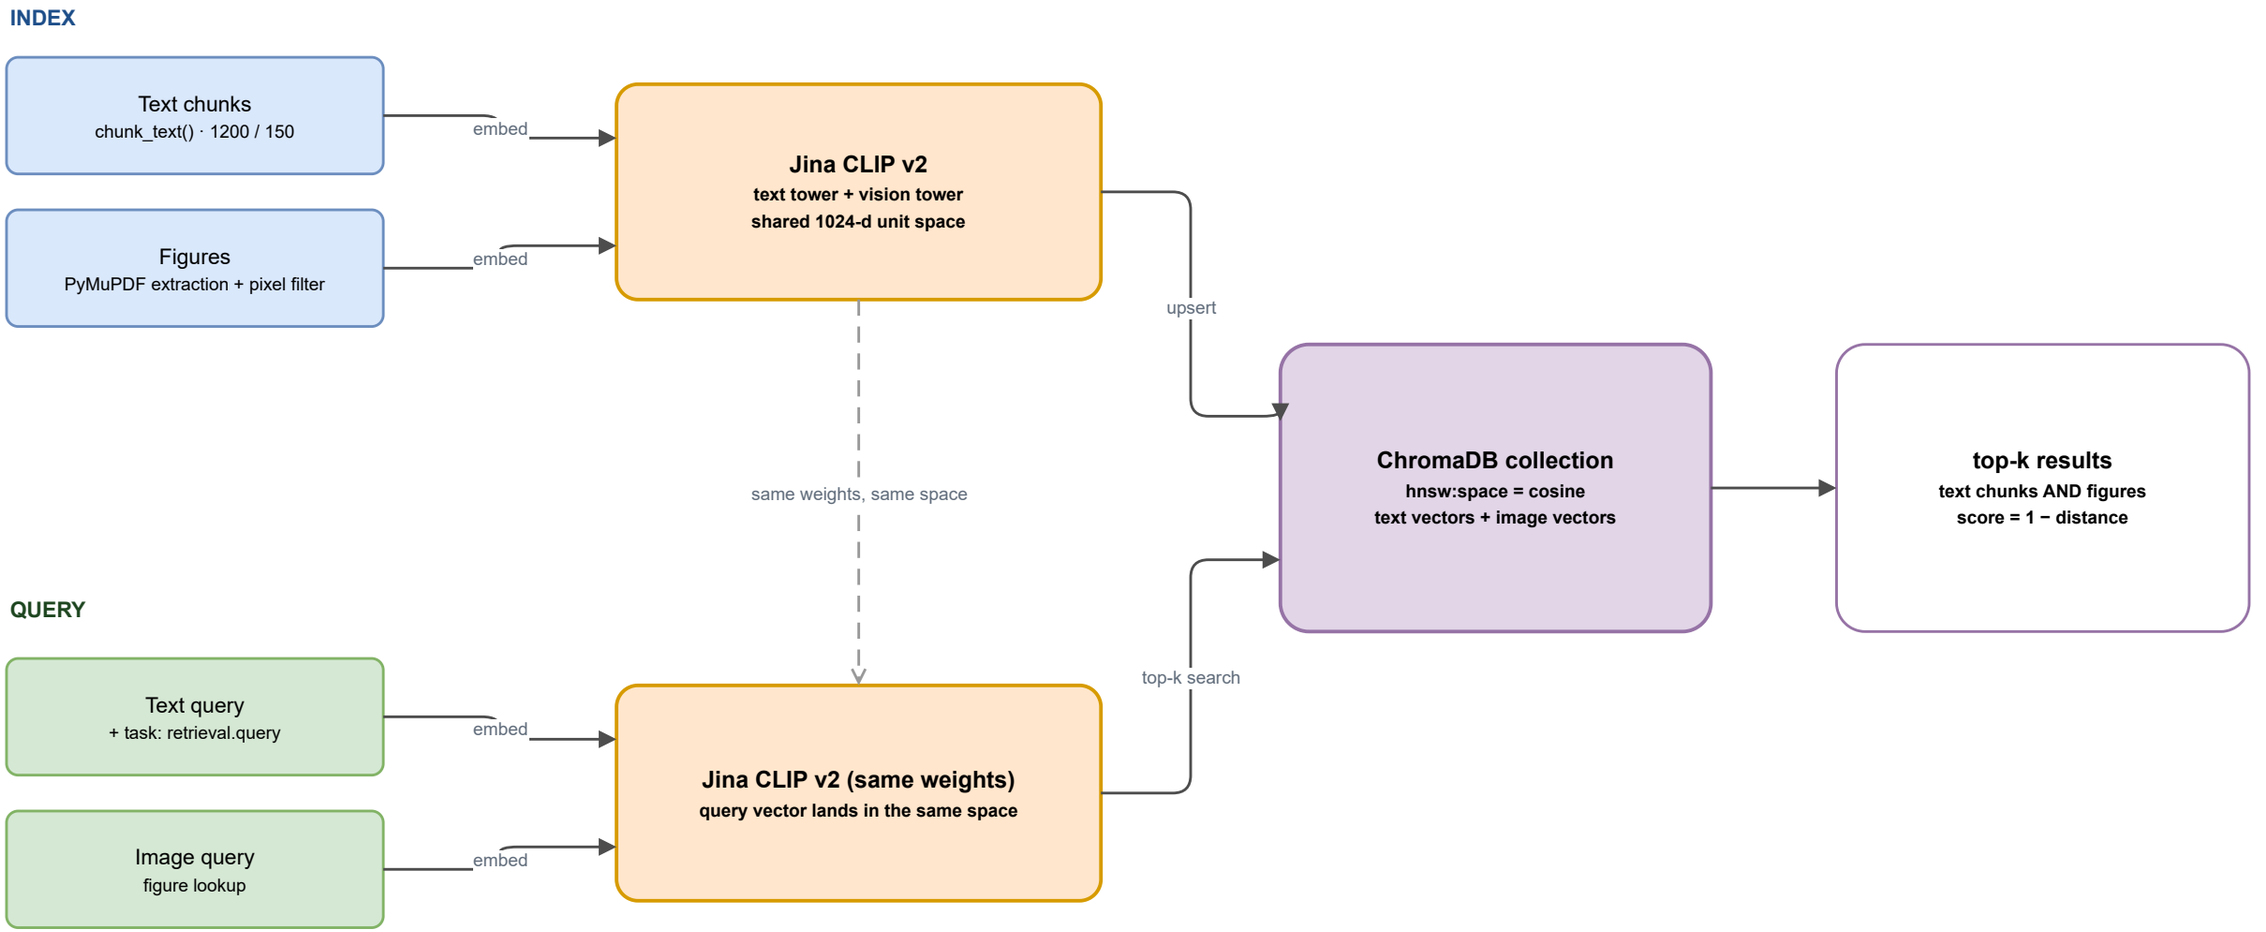

Jina CLIP v2 embeds text and images into one shared vector space; ChromaDB stores and searches it.

LEGEND solid arrow = data flow dashed arrow = configuration blue = interface green = application orange = core services grey = external systems

One vector space, two modalities

How text and figures become searchable, and how a query finds both.

Because text and images share one 1024-d space, a text query can return a figure — and an image query can return the paragraph that explains it.
Documents are indexed with no task instruction; queries carry Jina's retrieval.query instruction (asymmetric retrieval).
